Advanced Computer Graphics

2nd Partial Project

Student:
<your_name>

Professor:
Alfredo Emmanuel Garcia Falcon

Due date:
Wednesday October 21st, 2026

Objective

The objective of the project is to create a scene using the shaders made in class during the second partial in Unity.

Project description

The project will consist of creating a cinematic scene of at least 30 seconds duration in Unity with the shaders seen in class during the second partial. You must include the following shaders:

- PBR Shader
- Toon Shader
- Hologram Shader
- Extrude Shader
- Outline/Borderlands Shader
- Waves Shader
- Snow Shader

The goal is to show how to apply the shaders to a specific scene. The theme is free, and you can use as many shaders and configurations as needed.

Methodology

The project will be developed in teams of 3 people using Unity as the development environment with ShaderLab and HLSL coding language for shaders.

Project rubric

For this project, the score will be videogame implementation in Unity. It will be divided into components, and it will be graded if they are implemented in the project. The 100% will be divided among all the components in the rubric and each one of them will be added to obtain the 100%. It will be graded as follows: not implemented, implementation has bugs and correctly implemented. If it is not implemented, it won't add those points to the score. If it is implemented but has bugs, only half of the points will be counted. And if it is implemented correctly, all the points corresponding to the component will be added.

Here are the components of the project:

Description	Not implemented	Implementation has bugs	Correctly implemented
Scene starts without any problem			
Implementation of PBR Shader			
Implementation of Toon Shader			
Implementation of Hologram Shader			
Implementation of Sticker Shader			
Implementation of Extrude Shader			
Implementation of Outline Shader			
Implementation of Basic Waves Shader			
Implementation of Snow Shader			

Deliverables and due date

Despite it is a team project, each of the team members must deliver a .zip file that contains the **UnityPackage** file with everything necessary to run the game and the **.exe**. The file must have the following naming convention: ***NameLastname_ACG_2st_Partial_Project.zip***. For instance: AlfredoGarcia_ACG_2st_Partial_Project.zip.

The file must be uploaded to Blackboard no later than Wednesday 21st at 23:59 hours.
